# PROTEGRITY

**Protegrity's Enterprise Security Administrator (ESA)**

Duration: 8 hours (1 day)
Audience: Security and governance officers, system administrators, developers, and solution architects
Recommended Prerequisite: Protegrity's Data Protection Fundamentals course
Certificate of Completion: Yes

Description:
Centralize and monitor data security policies with Protegrity's Enterprise Security Administrator (ESA). Protegrity ESA is an intuitive, comprehensive interface for centralized, visual administration of data security policies, key management, auditing and reporting of sensitive data assets across the enterprise. ESA provides full-policy lifecycle management and policy feedback tools and dashboard to enable defining, monitoring, and subsequently changing data security policies without disrupting business, modifying application code, or changing the underlying application environment.

This course is an in-depth exploration of understanding ESA and how to use it to manage policies across the enterprise. This training includes demos, knowledge checks, and hands-on labs.

Agenda:

- Overview of ESA
- Installation, configuration, and patching
- Users and role management
- Policy management
- Key management
- Certificate management
- Backup and restore
- Trusted Appliance Cluster
- Logging
