PROTEGRITY

AGENDA

Protegrity's Application Protector for C

Duration: 4 Hours (half-day)
Audience: Developers, solution architects, and system administrators
Prerequisite: Protegrity's Data Protection Fundamentals course
Certificate of Completion: Yes

Description:

Install and configure Protegrity's Application Protector for C. The Protegrity Application Protector for C provides APIs for performing security operations in the client's applications. The Protegrity Application Protector for C is used in combination with the Enterprise Security Administrator (ESA).

This course is an in-depth examination of deploying the application protector to protect data in an application. It includes demos, knowledge checks, and hands-on labs.

Agenda:

- Overview of Application Protector
- Application Protector – C
- Protegrity Application Protector Standard Deployment Architecture
- Architecture Example – Cooperating Protectors
- Protegrity Application Protector Setup – Brief Overview
- Prepare to install
- Install Log Forwarder
- Install PEP Server
- PEP Server Configuration
- Start Services
